

Sub-processor Register

The single source of truth – every third party that may process personal data, what they do, where, and the status of their data-processing agreement.

Reconciled against the codebase 2026-05-17 · status shown honestly

This register is the reconciled union of every provider referenced anywhere on the platform. The DPA-status column is deliberately honest: "pending" means a standard or clickwrap DPA exists and counter-signature is being formalised; "in finalisation" means the written agreement is being closed with counsel and is not yet evidenced. We do not upgrade a status without the paperwork in hand.

Infrastructure (always active)

PROVIDER	PURPOSE	DATA	REGION	DPA STATUS
Supabase	Authentication, primary database, row-level-secured storage	Account identifiers, authentication data, learning progress, essay submissions at rest	EU / UK	Pending counter-signature
Microsoft Azure	Backend API processing	Request payloads in transit, technical metadata	UK South	Pending counter-signature
Vercel	Application hosting + edge delivery	IP address, request logs, technical metadata	US / global edge	Pending counter-signature
Cloudflare	Global edge, DNS, protective network layer	IP address, request metadata (ephemeral; no PII stored)	Global edge	Pending counter-signature
Stripe	Payment processing + subscription billing	Billing identifiers, card data (sent directly to Stripe). Under-18 accounts cannot enter payment data.	EU / US	Pending counter-signature
Sentry	Error and performance monitoring	Error context, technical metadata, IP address (scrubbed payloads)	EU / US	Pending counter-signature
Transactional email provider (Resend / Postmark)	Transactional email delivery	Email address, transactional email content	US	In finalisation — provider being confirmed

AI sub-processor (the high-risk entry)

PROVIDER	PURPOSE	DATA SENT	REGION	STATUS
Anthropic (Claude) model claude- sonnet-4	AI-assisted essay marking, predicted-grade estimate, essay feedback, CEFR assessment, study-material generation	Learner essay free-text, question text, exam board + year. No name, email, date of birth or school is sent.	US	DPA + written no-training / zero-retention confirmation in finalisation with counsel

HONEST NOTE ON THE AI SUB-PROCESSOR

Anthropic is the only LLM provider the platform calls (code-verified — there is no OpenAI or other model integration). Our contractual position is that submissions are **not** used to train models, and we apply strong data-minimisation at the AI boundary (no directly identifying fields are sent). The counter-signed AI data-processing agreement and the written zero-retention confirmation are being finalised with counsel; until those are in hand we describe this as "in finalisation" rather than claiming more. We will share both with your DPO once closed.

Analytics & growth (consent-gated — only active if the user opts in)

PROVIDER	PURPOSE	DATA	REGION	DPA STATUS
Vercel Analytics & Speed Insights	Aggregate web performance / Core Web Vitals	Aggregate page performance, coarse device/route metadata	US	Pending counter-signature
PostHog	Product analytics (event-level)	Product events, pseudonymous distinct id	EU / US	In finalisation — being confirmed live
Google Analytics 4	Aggregate usage analytics	Usage events, pseudonymous client id (IP truncated)	US	Pending counter-signature
Rewardful	Affiliate referral attribution	Referral attribution metadata	US	Pending counter-signature

FOR SCHOOLS SPECIFICALLY

The consent-gated analytics and growth tools above are **off by default for every under-18 account** under the Children's Code high-privacy defaults. In a school deployment, the providers that touch student data are the infrastructure set (Supabase, Azure, Vercel, Cloudflare, Sentry, the email provider) plus the AI sub-processor (Anthropic) — all under data minimisation. Stripe is engaged only where an adult makes a payment; under-18 accounts cannot enter payment data.

Change notification

We notify controllers of any intended addition or replacement of a sub-processor before it goes live, giving the opportunity to object. The current live register is also published at theenglishhub.app/data-processing and is updated within 30 days of any material change.
